

AREA 1 SECURITY POSTDELIVERY PROTECTION AND M-SOAR

Detection and Response Capabilities
Within and Beyond the Inbox

Missed detections combined with security awareness training have resulted in phishing emails landing in inboxes and increasing end user reported phish. This leads to what Gartner describes as “the challenge of security analysts spending a significant part of their time on phishing investigation and response.” To address this problem, Gartner recommends investing in email security solutions that include detection and response capabilities.

Area 1 Security’s Horizon platform includes postdelivery protection and mail security orchestration, automation and response (M-SOAR) through our Autonomous Phish SOC solution. Our end-to-end detection-to-response solution decreases your SOC’s incident triage time by more than 90%, improving response times and the security posture of your organization. Message retraction, along with easy integration with SIEM and SOAR partners, protects end users from email, web and social media-based phishing threats.

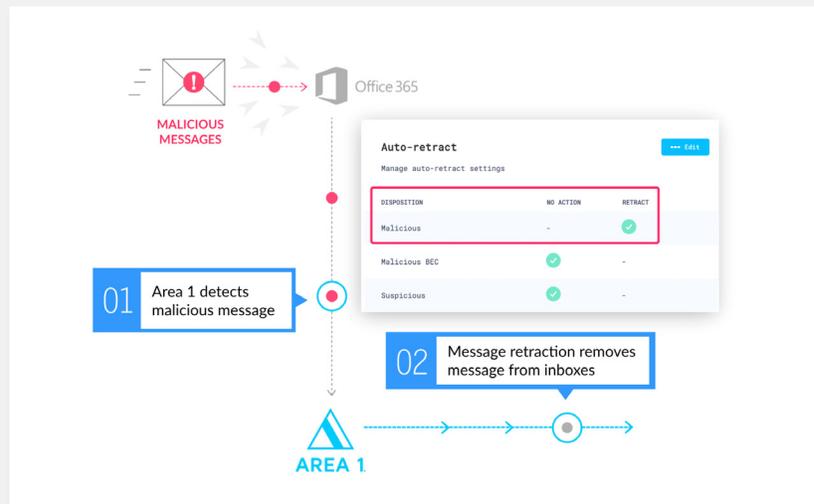

Area 1 Security’s cloud-native platform, Area 1 Horizon, provides both preemptive and postdelivery protection against a wide variety of threats including phishing, business email compromise (BEC) and advanced targeted threats.

Protect Against Threats in the Inbox

Through our advanced AI and machine learning techniques, in-the-wild large-scale phish indexing with ActiveSensors™ and other proprietary technologies, we’re able to protect organizations against email, web and social media-based threats sitting inside the inbox.

Native Postdelivery Protection

While we’re known for industry-leading preemptive protection against phishing and targeted attacks, the Area 1 Horizon platform also includes built-in Message Retraction to protect users from threats that reach the inbox. Combined with our auto-retraction policy, security teams can easily automate the removal of malicious messages from all inboxes. This feature allows threats to be neutralized even when the Area 1 solution is deployed in BCC or journaling mode.

Message Retraction provides targeted or automated remediation based on customer policies.

Automated Detection and Triage

To expedite SOC investigations, Area 1 Security also includes capabilities to automate routine SOC tasks such as automated detection pulls, searches and triage. These features, along with our prepackaged, multi-level forensics, allow security teams to easily prioritize tasks that require human oversight.

Fast and Simple Integration with SIEM and SOAR Platforms

While Area 1 Security’s built-in remediation via Message Retraction removes threats from inboxes, our simple integration with other SIEM and SOAR solutions allow for fully customized response playbooks. Easily coordinate alerting and response workflows across your entire security ecosystem including endpoint, identity and network security solutions.

IMPROVED RESPONSE TIMES

Area 1 Security’s simple-to-use yet powerful M-SOAR capabilities and enriched forensics accelerate triage, investigation and incident response.

Our solution has been demonstrated to **decrease SOC triage times by 90%**.

 **AREA 1.**

Based on Gartner's recommendations, our proven efficacy on stopping difficult-to-detection phishing threats, both preemptively and post delivery, plus extensive M-SOAR capabilities, makes Area 1 Security an attractive alternative to full-featured SOARs without compromising security.

For more details on our postdelivery and M-SOAR capabilities, download Area 1's [Autonomous Phish SOC Solution Brief](#).

About Area 1 Security

Area 1 Security is the only company that preemptively stops Business Email Compromise, malware, ransomware and targeted phishing attacks. By focusing on the earliest stages of an attack, Area 1 stops phish – the root cause of 95 percent of breaches – 24 days (on average) before they launch. Area 1 also offers the cybersecurity industry's first and only performance-based pricing model, Pay-per-Phish.

Area 1 is trusted by Fortune 500 enterprises across financial services, healthcare, critical infrastructure and other industries, to preempt targeted phishing attacks, improve their cybersecurity posture, and change outcomes.

Area 1 is cloud-native, a Certified Microsoft Partner, and Google Cloud Technology Partner of the Year for Security. To learn more, visit www.area1security.com, follow us on [LinkedIn](#), or subscribe to the [Phish of the Week](#) newsletter.
